Supplementary statement showing Venereal Diseases of In-door and Out-door Patients by sexes, treated in the Hospitals and Dispensaries 220-221

No. P-9 of 1927

Office of the Surgeon-General with the Government of Bombay;

Poona, 11th December 1926.
25th March 1927.

From

Major General A. HOOTON, C.I.E., K.H.P., I.M.S.,
Surgeon-General with the Government of Bombay,
Poona;

To

The SECRETARY to GOVERNMENT,
General Department, Bombay.

Subject—Report on Civil Hospitals and Dispensaries for the triennium 1923-25.

Sir,

I have the honour to submit for the information of Government the report on Civil Hospitals and Dispensaries for the triennium 1923-25.

Buildings

2. The hospitals have been kept generally in good repair. The most important additions and improvements made at certain hospitals during the period under review are shown below :—

(*a*) *The St. George's Hospital.*—A new building for the additional nurses' quarters was completed and taken into use.

(*b*) *The J. J. Hospital.*—The hospital was provided with a new out-patient department at a cost of over Rs. 4,72,000 and two new clinical laboratories.

It is proposed to add about 300 more beds to the J. J. and allied hospitals in Bombay in the near future at the joint expense of Government and the Sir Leslie Wilson's Hospital Fund. The expansion scheme as at present contemplated is as follows :—

(1) A new Children's Hospital of 100 beds.

(2) A new pavilion of about 100 beds to the J. J. Hospital.

(3) Rebuilding of the present Ophthalmic Hospital and increasing the accommodation from 73 to 100 beds.

(4) Extension of the Bai Motlibai Hospital by 50 beds.

(5) A new Isolation block for infectious cases.

(6) Nurses ', servants ' and other resident staffs ' quarters, etc.

Besides the above it is proposed to build a second new pavilion of 100 beds in the J. J. Hospital from the Ellappa Balaram donation.

(*c*) *The Cama and Albless Hospitals.*—A tubercle ward of 12 beds and maternity annexe were completed and taken into use.

(*d*) *The G. T. Hospital.*—The extension of the hospital with a view to its being utilised as a post-graduate teaching institution is in progress. The scheme includes an administrative block to contain office, library, museum and an up-to-date X-Ray department, and the New Prince of Wales Wards of 120 beds. The hospital will thus have in the future a total accommodation of 240 beds. New quarters for the additional nursing staff are also being provided. Plans for the extension of the north wing of the present hospital building (to include a new operation theatre, etc.) have already been approved by Government. It is also proposed to acquire the Nakhoda tank site adjoining the hospital compound for the future extension of the hospital and provide thereon an up-to-date out-patient department for which there is a great want.

(*e*) *The Civil Hospital, Alibag.*—A new bungalow for the Civil Surgeon was completed.

(*f*) *The Civil Hospital, Poona.*—The Temuljee Sorabjee Maternity Ward for Parsees with a Sanitary annexe was completed and taken into use. A new out-patient department and an operation theatre are under construction.

(*g*) *The New Infectious Diseases Hospital, Poona,* has partially been completed at a cost of about Rs. 4 lakhs and the new buildings have been taken into use.

(*h*) *The Civil Hospital, Ahmednagar.*— A new out-door department and an administrative block were provided.

(*i*) *The Civil Hospital, Nasik.*—A few infectious diseases block with accommodation for 8 beds was completed.

(*j*) *The Civil Hospital, Jalgaon.*—A Dharamshala for accommodation of relatives of patients was constructed from the funds provided by the Red Cross Fund Committee.

(*k*) *The Civil Hospital, Karachi.*—An upper storey was built on the nurses' quarters which has greatly relieved the shortage of accommodation for the nursing staff.

Statement A

3. The total number of institutions open at the beginning of the triennium was 782. In 1924 about 130 private dispensaries in Kathiawar States were omitted from the list of dispensaries in this Presidency as the States were transferred to the control of the Government of India.

Thus during the triennium the number of institutions fell from 782 to 638.

The number of Local and Municipal Fund Dispensaries rose from 327 to 331. New dispensaries were opened at Bhayander in Thana District and Bhusawal and a grant was made last year for the opening of a new Dispensary at Tankari in Broach District.

Two hospitals, *viz.*, the West Hospital, Rajkot, and the Scott Hospital, Palanpur, were transferred to the control of the Government of India. On the other hand the Municipal Dispensary at Mirpurkhas was taken over by Government and converted into a Civil Hospital.

Statement B

4. The total number of patients treated during the year 1925 was 2,835,740 as compared with 2,754,517 in 1924 and 2,560,701 in 1923. The mean number treated during the three years, 1923-25, was 2,716,986 against 2,503,749 in the previous triennium, *i.e.* 213,237 or 8·5 per cent. more, over the previous period. The increase was accounted for by both in-patients and out-patients. The in-patients numbered 80,982 in 1925, 78,514 in 1924 and 73,042 in 1923. The average number of in-patients treated during the triennium was 77,513 against 74,224 in 1920-22. The number of out-patients was 2,754,764 in 1925, 2,676,003 in 1924 and 2,487,659 in 1923 thus giving an average of 2,639,475 against 2,429,525 in the previous triennium.

The number of women seeking relief at hospitals and dispensaries during the triennium rose from 557,841 in 1923 to 608,127 in 1924 and to 636,601 in 1925. The average attendance of women at general hospitals and dispensaries was 526,579 as compared with 483,927 in the preceding triennium. The steady increase is attributable mainly to the employment of women doctors at general hospitals. There are at present 3 women Assistant Surgeons and 11 women Subordinate Medical Service Officers employed in the department.

The mean daily average attendance of in-door and out-door patients for the triennium was 3,764·1 and 26,660·1 respectively against 3,600·0 and 24,399·6 for 1920-22.

During the triennium under review the average number of in-patients cured was 48,110 against 49,813 in 1920-22. The average mortality for the period was 6,487 against 6,682 in 1920-22. The ratio of deaths per cent. to the total treated was 8·3 as compared with 9·0 for the previous triennium.

The number of beds available was 6,448 in 1925 as compared with 6,717 in 1922. The reduction in number of beds was mainly due to the re-arrangements of beds at the Maratha and Arthur Road Hospitals, Bombay, and the transfer of control of the West Hospital, Rajkot, the Scott Hospital, Palanpur, and the dispensaries at Wadhwan, Songad and Jetalsar to the Government of India.

Statement C.

5. The following table shows the principal diseases among the in-door and out-door patients treated in the State Public, Local Fund and

Municipal and Private aided institutions during the triennium and the mortality among in-patients :—

		1925		1924		1923		Mean for 1923-25		Mean for 1920-22	
		Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.

Cholera.—The disease was prevalent in a mild form in the Deccan during 1923 and 1924, the admission for these years being 1,269 and 1,951, respectively. It was kept under control by the free distribution of Potassium Permanganate 'treatments' in affected areas and the disinfection of wells and other sources of water supply. The disease was practically non-existent in 1925.

Leprosy.—The figures do not call for any remarks. It may, however, be mentioned that the disease has attracted much attention and measures for its control and eradication are being devised. The British Empire Leprosy Relief Association (Indian Council) has allotted funds to this Presidency for research in leprosy and for provision of short courses of training in the diagnosis and treatment of the disease. A provincial committee has been appointed by the Local Government to administer the funds and steps are being taken to appoint a Leprosy Expert for the Presidency.

Malaria.—The disease was prevalent almost all over the Presidency during the triennial period under review and is by far the greatest cause of sickness and ill-health. Recently Government have appointed a committee to take measures to stamp out the disease in Bombay City. In 1924 ten Subordinate Medical Service Officers were deputed for

anti-malarial work in Sind where the disease was of a severe type and in 1925 twenty-four Subordinate Medical Service Officers were detailed for this duty in parts of Konkan, Deccan and Sind. Quinine 'treatments' were sold to the public, as usual, in malarious districts at a cheap price and, in addition, 'treatments' worth Rs. 1,65,000 were distributed free during the triennium. The mean number of in-door and out-door admissions for malaria during the three years 1923-25 was 506,258 against 458,806, in 1920-22.

Small-pox.—The total number of in-door and out-door cases treated during the year 1925 was 2,008 against 3,120 in 1924 and 837 in 1923, the mean number for the triennium being 1,988 against 829 in 1920-22.

Tuberculosis.—The total number of admissions for tuberculosis was 50,128 with 2,590 deaths during the triennium against 37,579 with 2,066 deaths in 1920-22.

Labour cases.—The number of cases (in-door) admitted during the triennium was 23,827 against 23,084 in the previous triennium.

Police, Canals, Forest and other State Special Institutions

The attendance was 66,873 in 1925 as compared with 62,441 in 1924 and 56,487 in 1923. The average attendance during the triennium under review was 61,934 as compared with 61,101 in 1920-22.

The total number of patients treated at Railway Hospitals and Dispensaries during 1925 was 324,848 against 312,933 in 1924 and 283,178 in 1923, the average for the triennium being 306,946 against 257,473 in 1920-22.

The total number of patients treated at private non-aided institutions during the year 1925 was 912,433 as compared with 1,167,871 in 1924 and 1,644,597 in 1923. The average number for the triennium was 1,241,634 against 1,450,179 in 1920-22. The decrease is attributable to the fact that Kathiawar is no longer included.

Statement E

6. Of the patients treated during 1925, 18,611 were Europeans or Eurasians, 1,765,041 were Hindus, 901,137 Mussalmans and 150,957 belonged to other classes. There were on an average 18,151 Europeans or Eurasians treated per year sgainst 18,589, 1,706,326 Hindus against 15,76,199, 850,810 Mussalmans against 777,816 and 142,367 other classes against 131,137 in 1920-22.

Statement F

7. During the year (1925) 117,851 surgical operations were performed on 117,123 persons with a mortality of 0·43 per cent. The mean number of surgical operations performed during the triennium was 111,141 against 99,142 in the previous triennium. The average number of persons operated on during the period was 110,884 with a mortality of 0·41 as compared with 98,476 with a mortality of 0·42 in 1920-22.

There were 1,233 operations for removal of tumours and cysts with 9 deaths in 1925 against 1,200 with 7 deaths in 1924 and 1,163 with 4 deaths in 1923. The mean number of these operations was 1,199 per annum with 7 deaths against 1,481 with 10 deaths in 1920-22.

Amputations numbered 670 with 27 deaths as compared with 771 with 46 deaths in 1924 and 670 with 36 deaths in 1923. On an average 704 amputations were performed per annum with 36 deaths against 700 with 35 deaths in 1920-22.

Operations on the eye numbered 7,739 of which 2,440 were for extraction of lens for cataract, against 6,000 in 1924 and 8,553 in 1923. The average number of eye operations for the triennium was 7,431 per year against 8,270 in 1920-22.

Vesical calculi were removed by litholapaxy and lithotrity in 1,184 cases with 8 deaths against 1,165 with 15 deaths in 1924 and 886 with 10 deaths in 1923. Lithotomy was resorted to in 158 cases with 13 deaths against 196 with 27 deaths in 1924 and 129 with 13 deaths in 1923. The average number of operations for the removal of stone for the triennium was 1,239 per annum with 29 deaths as compared with 1,035 with 35 deaths in 1920-22.

Abdominal operations other than those for diseases peculiar to women numbered 1,412 with 110 deaths during 1925 against 1,507 with 180 deaths in 1924 and 1,408 with 104 deaths in 1923, while for diseases, peculiar to women the numbers were 262 with 8 deaths as compared with 84 with 8 deaths in 1924 and 148 with 5 deaths in 1923. The mean number of the former class of operations for the triennium was 1,442 per annum with 133 deaths against 1,738 with 111 deaths for 1920-22 and that of the latter was 165 with 6 deaths against 151 with 2 deaths in the preceding triennium.

Operations for hernia numbered 465 with 17 deaths against 486 with 23 deaths in 1924 and 377 with 22 deaths in 1923. The mean number for the triennium was 443 with 21 deaths as compared with 359 with 19 deaths in 1920-22.

Operations for abscess of liver numbered 114 with 9 deaths against 121 with 22 deaths in 1924 and 161 with 39 deaths in 1923. The average number of these operations was 132 per annum with 20 deaths as compared with 165 with 33 for the preceding triennium.

Obstetric operations numbered 1,440 with 37 deaths against 1,219 with 41 deaths in 1924 and 1,101 with 28 deaths in 1923. The average number of obstetric operations for the triennium was 1,253 per annum with 35 deaths against 1,012 with 33 deaths in 1920-22.

Operations for conditions peculiar to women other than obstetric and abdominal numbered 1,038 with 9 deaths against 560 with 10 deaths in 1924 and 804 with 14 deaths in 1923. The average number of these operations for the triennial period was 800 per annum with 11 deaths as compared with 698 with 8 deaths for 1920-22.

Statement G

8. The total receipts inclusive of cash balance amounted to Rs. 58,77,554 in 1925 as compared with Rs. 56,39,247 in 1924 and

Rs. 53,86,655 in 1923. Of this amount Rs. 5,65,083 were contributed by Local Boards, Rs. 9,36,720 by Municipalities and Rs. 31,52,310 by Government. The interest on invested capital yielded Rs. 73,647. Miscellaneous receipts amounted to Rs. 6,08,420 of which Rs. 2,00,318 were contributed by the several Nursing Associations.

The total expenditure amounted to Rs. 54,75,182 as compared with Rs. 51,74,969 in 1924 and Rs. 50,10,883 in 1923. Deducting from this Rs. 1,95,256 remitted into the Treasury on account of hospital fees, sale proceeds of unserviceable articles, etc., and Rs. 41,882 invested during the year the net expenditure for 1925 was Rs. 52,38,044. The average cost of each diet was Rs. 0-6-4.

The average income for the triennium was Rs. 56,34,482 against Rs. 46,72,487 in 1920-22. The average annual expenditure for the period amounted to Rs. 52,20,345 (of which Rs. 28,36,189 were contributed by Government and Rs. 15,63,488 by Local and Municipal Funds) as compared with Rs. 42,97,053 expended in 1920-22. The mean percentage of cost borne by Government was 54·3 against 59·7 in 1920-22. The average cost per patient during the triennium was Rs. 1-12-10 against Rs. 1-9-7 in the previous triennium.

Statement H

9. On the 1st January 1925 the invested capital stood at Rs. 1432,353. During the year Rs.41,882 were invested. The total invested capital at the end of the year was Rs.14,74,235.

Medical Schools

The sub-joined table shows that at the close of the year there were 497 students attending the three Provincial Medical Schools. :—

Class of student	B. J. Medical School, Poona					B. J. Medical School, Ahmedabad					Medical School, Hyderabad					Total
	4th Year.	3rd Year.	2nd Year.	1st Year.	Total	4th Year.	3rd Year.	2nd Year.	1st Year.	Total	4th Year.	3rd Year.	2nd Year.	1st Year.	Total.	
Indian Military Pupils.	..	..	..	..	..	3	..	..	..	3	..	..	..	..	..	3

Total ..	66	59	67	70	262	43	29	49	31	152	9	6	23	45	83	497

With a view to improve the facilities for teaching at the Medical Schools laboratories for practical instructions in the various scientific subjects are being provided. Those at the Medical School, Ahmedabad, have already been completed at a total cost of Rs.1,18,150 and those at Poona are approaching completion. The estimated expenditure for Poona is Rs. 1,10,400.

Anti-rabic treatment

10. Arrangements for anti-rabic treatment now exist at the Haffkine Institute, Bombay, and at 12 hospitals in the mofussil. The opening of these centres has been a great convenience to the general public, and the results of this, a comparatively new departure, have been satisfactory.

11. A note on the objections to the support by Government of the indigenous system of medicine with some remarks on Medical Relief in Rural Areas is appended to this report.

I have the honour to be,

Sir,

Your most obedient servant;

A. HOOTON,

Major-General, I.M.S.,

Surgeon-General with the Government of Bombay.

Note on the objections to the support by Government of the indigenous systems of Medicine with some remarks on Medical Relief in Rural Areas.

The demand for medical aid in rural areas is becoming more and more insistent, and it seems clear that Government will shortly have to declare its policy as to what direction the development of the future is to take. One thing is plain. The regular practitioners, fully qualified on modern scientific lines, are too expensive to be multiplied indefinitely for country work, and Government and the local authorities can only hope to keep a moderate number of them established in institutions, designed primarily to serve the poorer population of comparatively large centres, and to deal with Government and Municipal duties. Apart from these, it is evident that some less expensive agency must be found for the villages and rural areas in general.

Broadly speaking, the alternatives to the regular practitioners are the *vaid* or *hakim*, who in many cases is already available on the spot, and the possibility of creating some inferior class of whole-time or part-time practitioner, trained, in however elementary a manner, on modern scientific lines.

The question of choice is a most important one, involving as it does the future medical progress of India, and it is worthwhile to consider carefully the arguments for and against each alternative, before committing ourselves to steps which it would be difficult or even perhaps impossible, to retrace.

Arguments in favour of the indigenous systems

The attempts which have occasionally been made to brush aside the Ayurvedic and Yunani systems of medicine with contempt may be at once rejected. The former, at all events, can claim some of the most eminent pioneers of the profession, and it is certain that 500 years ago both the Hindu and Mohomedan physicians must have been greatly superior in many respects to those of Europe. The names of Charaka and Sushruta may fairly be placed besides those of Hippocrates and the other ancient Greek physicians, and in point of time they preceded them. The Ayurvedic school laid the foundations of modern anatomy, physiology and pathology, and they also discovered many useful drugs.

Arguments against the indigenous systems

The researches of the practitioners of the ancient Indian systems were most enterprising and praiseworthy, considering the conditions under which they were made, but the absence of modern facilities led them into many errors. Thus, although the *vaids* dissected bodies, it was by such crude methods that they confused arteries with tendons, and tendons with nerves, and although they recognised and described the main organ they had no accurate knowledge of their functions. The theory of pathology which they evolved was merely speculative, and it is only by an entirely unjustifiable stretch of the imagination that the humours—*Vat* (wind), *Pitta* (bile) and *Kapha* (philegm)—can be made to fit into any reasonable scheme of modern pathology. The remedies they employed, moreover, were on an entirely empirical footing, and the

doses were not properly worked out, so that when powerful drugs were used considerable risks of overdosage were often run. At the present day, it is not uncommon to come across instances of such dangers. Mercury is perhaps the most familiar example, and cases of necrosis and sometimes total loss of the lower jaw from excessive doses administered by practitioners of the indigenous systems are only too frequent. Arsenic is also given by them, and gastrointestinal irritation from its improper use is not unknown. Inability to recognise conditions under which certain drugs cannot safely be administered is also a frequent cause of danger for men who have had no regular scientific training, and wo cases may be quoted which appeared in the press last year: one, presumably of intestinal obstruction, in which a large dose of croton oil was given improperly by a *hakim* and another, of asthma, in which some unknown drug was administered. In both, death was reported to have followed almost immediately. It has also to be added that practitioners of the indigenous systems keep their remedies secret, when they are able to do so, thus making research difficult, and limiting the spread of knowledge.

Modern scientific medicine

The system of medicine commonly spoken of as Western Medical Science is not, as one might gather from various debates which have recently taken place, a product of purely European growth. Like astronomy and some other sciences it had its origin, not in the West, but in the East, and it is the result of the impact of modern scientific thought—mainly, no doubt a Western development—on the ancient knowledge. At the present time, the modern system incorporates many of the old Indian remedies, and it is easy to substantiate the contention of the advocates of the indigenous systems that methods of treatment which have been hailed as new discoveries of the modern school have had their counterparts in the East long ages ago. Various developments of hydro-therapy and the deprivation of salt in dropsy may be quoted as instances of this in medicine, and light splinting and the early movement of fractures in surgery. Modern scientific medicine should therefore not be regarded with hostility as a stranger in India, but welcomed as a younger branch of the same family. The ancient wisdom has returned, reinforced by new ideas and discoveries which make it many times more valuable. Accurate dissection has taken the place of scraping a decaying body with twigs, and founded the modern science of anatomy: careful experiments have placed the science of physiology on a sound basis, and enabled us to ascertain the functions of the principal organs: *post-mortem* examinations and other scientific methods of research have taught us a great deal about disease: and medicine and surgery, apart from advances within their own bounds, have profited enormously from all these basic sciences as well. It is perhaps needless to dilate further on all this. At the present day modern medicine and surgery are probably as highly appreciated in the East as in the West by those who are in a position to judge for themselves and to command the services of the best practitioners. The difficulty has always been to make them available for the poorer people in rural areas.

The alternatives

We are now, it would seem, at the parting of the ways, and a decision will shortly have to be arrived at as to the Government agency which is to be responsible for administering medical aid in rural areas, apart from the taluka headquarter dispensaries. Granted that some inferior and more economical means is required, there are as above, noted, 3 main alternatives that might be made available, the perpetuation and extension of one or more of the indigenous systems, the creation of a special class, trained in elementary medicine on modern scientific lines (like the inferior veterinary assistants who used to be known as Salutaris), or the employment of some permanent Government servants, such as the primary schoolmasters, also trained on modern lines, on a part time basis.

The first of these alternatives, the utilisation of the *vaids* and *hakims*, is at first sight attractive, and has been carefully considered. It has, however, serious objections, some of which have already been referred to, and on further discussion it was found that these objections were realised fully by many advanced Indian thinkers. A very distinguished Hindu social reformer, to whom the question was referred, was strongly opposed to the proposal, and only one member of a small conference of Indian gentlemen specially interested in such subjects spoke in favour of the proposition to revive the indigenous systems for rural work. One is faced at once with the difficulty of training. If the *vaids* and *hakims* are to be used, are they to be trained in eastern or western methods or both? At the present day to restrict treatment to the methods of the indigenous systems in the light of all the advances of the nineteenth century would be unthinkable, and to call the practitioners Ayurvedic and let them work on a basis of modern science would not be fair or honest.

The proper view point

This question has hitherto, unfortunately, been considered, and debated, more on political, racial and even religious lines, than on its merits. Surely the time has now arrived when it may be taken up on a less prejudiced footing. The experience of Japan in this connection is very instructive. As everyone knows, that country was at first violently opposed to all western innovations, and medicine was no exception to the general rule. It is even recorded that in the sixteenth century many Portuguese and native medical men, practising the western system—such as it was, in those days—were put to death. As late as the eighteenth century, indeed, the Japanese believed that the viscera of the European barbarians were transposed, *i.e.*, that instead of being in the position affected by all good Japanese, their livers were on the left side and their hearts on the right—and it was only in that century, when the first *post-mortem* examinations were made on European lines, that this erroneous impression was corrected. From that time onwards, however, all seems to have gone well. The existing system—a branch of ancient learning, originally imported from China, and no doubt very respectable, though hopelessly antiquated—was

gradually displaced, and modern scientific medicine adopted, until now, Japan can boast twenty-seven medical schools (eighteen of university standing) and Kitasato and Shiga are listened to with respect and admiration throughout the civilised world. As regards the ancient Chinese system, it was recently stated by a distinguished Japanese official that it has almost expired, and that only in the most remote places are practitioners other than those of the modern school to be found in Japan.

A Scheme in being

Proposals were put up to Government, in 1923, for an experimental trial of primary schoolmasters for elementary medical and surgical aid in villages. Thirty of these men are at present at work, in selected villages in the districts of Poona, Bijapur, Sholapur and Dharwar. The scheme is shortly as follows. Selected primary schoolmasters are posted for a period of training of 2½ months to civil hospitals where special arrangements are made for them. The men are taught elementary anatomy and physiology as in ambulance classes, and given practical 'First-aid' instruction in medicine and surgery. They work in the wards and out-patient department, and the course is made as practical as possible. At the end of it they are expected to be able to dress wounds and ulcers, to treat sore eyes, and to recognise and treat with simple remedies some of the more important diseases. They are also taught elementary hygiene (ventilation, safeguarding of water supply, prevention of malaria, etc.). Training is of course carried out in the appropriate vernaculars. The cost of training works out at about Rs. 72 for each man. The equipment (village aid cabinet) costs Rs. 250, and the upkeep of one Aid Post comes to Rs. 300 per annum inclusive. The scheme is therefore very economical.

It has proved successful, and the *upacharaks*, as they are called, are now in great request wherever they are stationed. In Bijapur, particularly, their work has met with cordial recognition from official and non-official observers, and the village officers and villagers in general are almost unanimously in favour of its extension. Requests are frequently received from villages which have no *upacharaks* for aid posts to be established. A general review of 8 months' work, from 1st June 1925 to 31st January 1926, has recently been taken in the Bijapur district, and the following remarks apply to the 10 centres now in operation there. In these 10 centres, during the 8 months, 31,122 cases were treated. These included malaria, dysentery and diarrhœa, eye diseases, skin diseases, wounds and ulcers, and many other affections. Very favourable reports have been received from the Collector, the Assistant Collector, the President of the District Local Board and the Civil Surgeon, amongst numerous others.

Equally good accounts have come from Poona, the other district in which the *upacharaks* were early established, and it is hoped that a combined report on the whole scheme will shortly be available.

Investigation and utilisation of Indian drugs

Government has recognised the desirability of investigating such Indian drugs as have not hitherto been incorporated in the regular

pharmacopœias, where reasonable grounds exist for believing that they are worth examination, and the pharmacological Unit of the Haffkine Institute has for some time past been engaged in research work of this description. It is also realised that some Ayurvedic and other indigenous remedies, the qualities and proper doses of which are well known, may usefully be incorporated in the village aid cabinets. As time goes on, no doubt these may be added to.

Conclusions

1. The Ayurvedic and some other indigenous systems did very good work in their day, but they are based on erroneous theories and cannot bear comparison with the modern system of medicine founded on recent advances in science. The remedies are largely secret, and there has been no proper investigation of their active principles, or standardisation of dosage.

2. As regards the regular practitioners of modern scientific medicine and surgery, it is generally admitted that they are superior to any others. Where they cannot be provided—chiefly for reasons of expense—it is desirable to establish some inferior class of practitioner, and for moderate-sized villages, these may be on a part-time footing. It has been shown that primary schoolmasters can be very useful in this capacity, at a moderate cost.

3. To revert to any of the ancient systems of medicine would be a very retrograde step. They are not founded on scientific principles, and are entirely out-classed by modern scientific medicine. It is admitted that any revival of the ancient systems must be largely dependent on the assimilation of scientific knowledge. Ayurvedic medicine, on these lines, would be Ayurvedic only in name, and any such scheme would be an unworthy subterfuge.

4. Apart from a revival of the Ayurvedic or other indigenous systems as such every effort is being made to investigate Indian drugs, and these should be utilised whenever it appears desirable to do so.

A. HOOTON,
Major-General, I.M.S.,
Surgeon General with the Government of Bombay.

27th May 1926.

APPENDIX I

CIVIL HOSPITAL AND DISPENSARY STATISTICS

STATEMENT A

Showing the number of Civil Hospitals and Dispensaries in the Bombay Presidency during the year 1925

[Total Population of the Province—26,757,648.]

Class of Civil Hospital and Dispensary.	Number open on 31st December 1924.	Number opened during the year 1925.	Number closed during the year 1925.	Number open on the last day of the year 1925.	Remarks.
1	2	3	4	5	6
I.—State—Public ..	53	(*a*) 1	(*b*) 2	52	(*a*) Mirpurkhas Dispensary changed into a Civil Hospital.
II.—State—Special—					(*b*) West Hospital, Rajkot and Scott Hospital, Palanpur transferred to the control of Government of India.
(i) Police ..	4	..	..	4	
(ii) Forests and Surveys	1	..	..	1	
(iii) Canals ..	8	..	..	8	
(iv) Others ..	16	..	..	16	
III.—Local and Municipal Funds.	329	(*c*) 5	(*d*) 3	331	(*c*) Turner Dispensary, Anti-Tuberculosis Dispensary, and Venereal Diseases Dispensary in Bombay City and Ganj and Karaba Peth Dispensaries in Poona City.
IV.—Private—Aided ..	17	..	..	17	(*d*) Wadhwan and Songad Dispensaries transferred to the control of the Government of India.
V.—Private—Non-aided ..	148	..	..	148	
VI.—Railways ..	61	..	..	61	
Total ..	637	6	5	638	

CLASSES I AND II.—These include all institutions maintained by provincial funds and under Government management. The fact that an institution possesses endowments or receives contributions from local funds or private subscriptions has not been regarded as a reason for not classing it as 'State' when provincial and imperial funds are practically responsible for all the charges connected with it Class I—'Public' are State Dispensaries which are open to the poorer classes of the public. Class II are State Dispensaries which serve only a special section of the public as indicated in the sub-classification attached.

CLASS III.—Local fund dispensaries include all institutions which are vested in local boards or municipalities or guaranteed or maintained by local or municipal funds. The fact that such an institution is aided by private subscriptions or receives assistance from Government in the shape of part of the salary of the medical officer, grants of medicine, or otherwise, has not been regarded as a reason for not classing it as a local fund dispensary, when its existence is practically dependent upon local funds.

CLASS IV.—Comprises institutions supported by private subscriptions or guarantee, but receiving aid from Government or local funds.

CLASS V.—Comprises institutions maintained entirely at the cost of private individuals or associations. The fact that Government supplies superior inspection or registers has not been regarded as a reason for not treating it as a private non-aided dispensary.

CLASS VI.—Comprises all railway dispensaries whether maintained by State railways or others.

MO 0 9—29

BOMBAY: PRINTED AT THE GOVERNMENT CENTRAL PRESS.

Annual Reports.

Triennial Report on Civil Hospitals and Dispensaries in the Bombay Presidency for the years 1923-1925.

GOVERNMENT OF BOMBAY.

GENERAL DEPARTMENT.

Resolution no. P.-47.

Bombay Castle, 18th July 1927.

Letter from the Surgeon General with the Government of Bombay no. P.-9, dated the 13th July 1927:—

"I have the honour to forward herewith the Triennial Report on Civil Hospitals and Dispensaries in the Bombay Presidency for the years 1923-1925 and to state for the information of Government that there is nothing in it, the immediate publication of which can be considered as of doubtful expediency."

RESOLUTION.—Recorded.

By order of the Government of Bombay
(Transferred Departments),

A. H. DRACUP,
Under Secretary to Government.

To

The Surgeon General with the Government of Bombay,
*The Director of Public Health for the Government of Bombay,
*The Commissioner in Sind,
*The Commissioner, Central Division,
*The Commissioner, Bombay Suburban Division,
*All Collectors, excepting those in Sind, Northern Division and Southern Division,
*The Collector, Bombay Suburban District,
*The Director of Information,
*The Municipal Commissioner for the City of Bombay,
*The Municipal Secretary,
*The Accountant General,
*The Compiler, General Administration Report,
The Private Secretary to His Excellency the Governor,
The Government of India (by letter),
The Under Secretary of State for India (by letter).

*With copies of the Report.
